KaiFly™

High volume flat surface cleaning with zero cross-contamination

The innovative patent-pending KaiFly system combines microfiber, window squeegee and chemical injection technologies to rapidly remove harmful bio-pollutants from desktops, chalk and dry erase boards, tabletops, stalls, partitions, windows and much more.

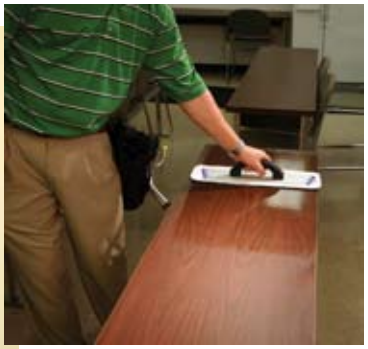
KaiFly is scientifically proven to clean at least six times better than towels or wipes. Tested with an ATP measurement device, it was found that cleaning with microfiber towels or rags left approximately six times more soil behind on average.

In addition, conventional cleaning methods, such as microfiber towels or rags, are typically less effective as workers clean more and more surfaces. This cross-contamination can leave the last surface cleaned with two to eight times more soil than the first surface cleaned. KaiFly maintains equal effectiveness regardless of the number of surfaces cleaned and eliminates the risk of cross-contamination.

Ergonomically designed, KaiFly also cleans in half the time or less than traditional methods. Spraying diluted cleaning chemical directly onto the microfiber pad allows for quicker and more even application on surfaces. The squeegee then finishes the job by simultaneously removing soils and drying surfaces in one swipe. KaiFly also elimates the circular scrubbing motion typically used with towels and rags, relieveing strain on workers' backs and shoulders.

Highlights

- KaiFly removes six times more soil and bio-contaminants than conventional methods, such as microfiber towels and rags.
- Maintains same amount of cleaning effectiveness from the first surface cleaned to the last, eliminating the risk of cross-contamination.
- Ergonomically designed to relieve strain on workers' backs and shoulders by use of fluent motions rather than strenuous circular motions.
- Cleans in half the time of traditional methods, increasing worker productivity.



KaiFly includes:

a. Motorized sprayer and quart bottle
b. Holster with Velcro belt loop
c. Squeegee
d. Trowel
e. 5 Microfiber pads
