

QuickDraw™

Instant Chemical Injection

QuickDraw, Kaivac's innovative At-Gun Chemical Injection system, makes No-Touch Cleaning™ practical and really fast in small restrooms, like those found in healthcare facilities, convenience stores, fast food restaurants, small office buildings, and so on.

QuickDraw combines a multi-mode spray gun with an ergonomic hip-pack that contains a chemical pouch into a lightweight, worker-friendly system. Now workers can control their No-Touch Cleaning systems right at the point of use - with the spray gun - rather than returning to the machine. And because the chemical is located so close to the gun, switching between chemical application and clean water modes is immediate. No more time is wasted drawing or purging chemical from the spray line. Plus, its lightweight chemical pouch is able to hold two liters of concentrated chemical capable of cleaning 300-700 fixtures.

QuickDraw not only streamlines the cleaning process but significantly reduces water usage and chemical waste. In fact, in certain restroom situations, QuickDraw is 40% faster than the already industry-best No-Touch Cleaning times. And, it reduces water usage by as much as 50%, increasing the number of fixtures cleaned by a single tank of water to approximately 75.

Weighing in at less than five pounds with a full chemical pouch, QuickDraw allows workers to deeply clean tight spaces with ease and virtually no strain. Ergonomic in design, QuickDraw includes adjustable load control straps helping to stabilize loads by pulling the pack closer to workers' bodies, a spacious main zippered compartment that houses a refillable chemical pouch, two mesh tool holders, and an adjustable padded waist strap with a quick-release buckle.

QuickDraw - one more reason why Kaivac is lean on resources, mean on soils and the greenest system on earth.

Highlights

- Lean, Mean and Green™
- 40% Faster
- Instant Chemical Injection
- Instant Clean Water Spray
- Uses 50% Less Water
- Eliminates Chemical Waste
- Simplifies Training
- Lightweight and Ergonomic
